Evaluation of the Island Open Sim Designing Computer Games Project

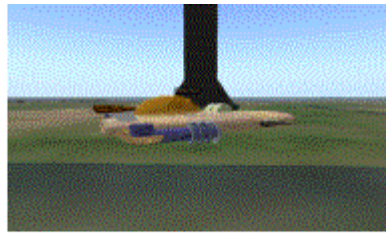

On the following four pages I have included the raw data from my Island project June 2010 survey. The project was the result of work carried out by a group of level 3 students at Bromley College who are currently enrolled on the BTEC National course in Software Development.

The Island project was designed as a shoot-em up style of combat game. The avatars where divided into two teams, one defending an island equipped with sea going defences in the form of boats, while the other group where airborne. Scoring was based on bullet hits and recorded in-world as coloured blocks on a large scoreboard.

You will see form the data that students have not attempted all questions and this may be a reflection on the size of the final survey, which was larger than I originally intended.

The questions I used here represent a subset of those contained in an original student survey produced by Tanya Joosten, Learning Technology Center, Department of Communication, University of Wisconsin-Milwaukee.

If you have any comments or feedback on the data I would be pleased to hear from you barrys@bromley.ac.uk
